

**Amendments to the Claims:**

The following listing of claims will replace all prior versions, and listings, of claims in the application:

---

1. (Currently Amended) An image display apparatus, comprising:  
an image display unit; and  
an image reproduction module that generates display video data, which is to be displayed on the image display unit,  
the image reproduction module having an image transition controller that uses a predetermined image selection mask to process a first image and a second image and thereby generate the display video data in the case of changing display on the image display unit from the first image to an image including the second image in at least part of a display area of the first image,

wherein the image transition controller comprises:

a storage module that stores therein the first image, the second image, and a base selection mask having an image area of a smaller size than the at least part of the display area, wherein the image area comprises a first area in which the first image is selected and a second area in which the second image is selected; and

a selection mask conversion module that converts the base selection mask into the image selection mask having an image area of an identical size with the at least part of the display area,

wherein the selection mask conversion module obtains the image selection mask by setting the base selection mask as one block data and repeating the block data in a two-dimensional manner.

2. (Original) An image display apparatus in accordance with claim 1, wherein the selection mask conversion module obtains the image selection mask through expansion/contraction of the base selection mask.

3-4. (Canceled)

5. (Original) An image display apparatus in accordance with claim 1, wherein the image reproduction module further comprises an interface that is capable of reading data stored in a portable recording medium, and

at least one of video data representing the first image and the second image is read from a recording medium connected to the interface.
